

# Luke Yamaguchi

Irvine, CA | [yamaluke@g.ucla.edu](mailto:yamaluke@g.ucla.edu) | [yamaluke.com](http://yamaluke.com) | [linkedin.com/in/yamaluke](https://linkedin.com/in/yamaluke) | US Citizen

Embedded Firmware • Secure Hardware Architecture • Wireless Systems

## EDUCATION

<b>University of California, Los Angeles (UCLA)</b>	Sep 2024 - Jun 2027
<b>M.S. Electrical &amp; Computer Engineering</b> (Exceptional Student Admission Program)	Expected Jun 2027
<b>B.S. Computer Engineering</b>	Expected Jun 2026
<ul style="list-style-type: none"><li>• <b>GPA:</b> 3.81/4.00</li><li>• <b>Relevant Coursework:</b> Operating Systems, Computer Systems Architecture, Computer System Security, Algorithms and Complexity, Data Communications and Telecommunication Networks, Digital Signal Processing</li></ul>	
<b>Irvine Valley College</b>	Aug 2022 - Aug 2024
<b>AS-T Mathematics, AS Physics</b>	

## SKILLS

**Languages:** C, C++, Verilog, Python, Bash, MIPS Assembly  
**Hardware & Architecture:** FPGA (Basys 3), STM32, ARM Cortex-M7, Raspberry Pi Pico, Arduino  
**Wireless & Signal:** ADALM-Pluto SDR, GNU Radio, Wireshark, Internet Protocols  
**Tools & Lab:** Git, Linux, Docker, GDB, MATLAB, Oscilloscopes, Digital Multimeter, Analog Discovery 2  
**Language:** English, Japanese

## EXPERIENCE

<b>Undergraduate Researcher</b>	Los Angeles, CA
Secure Systems and Architectures Lab - UCLA	Oct 2025 - Present
<ul style="list-style-type: none"><li>• Researching BLE security and RF device authentication using physical-layer characteristics as hardware fingerprints</li><li>• Built GNU Radio DSP pipeline to extract physical-layer features from BLE signals captured from ADALM-Pluto SDR</li><li>• Training ML models for RF device authentication on a Linux remote server</li><li>• Implementing adversarial RF spoofing attacks to evaluate the robustness of the RF fingerprinting system</li></ul>	

## PROJECTS

<b>Hardware-Enforced Digital Lock System - Basys 3 FPGA</b>	Feb 2025 - Mar 2025
<ul style="list-style-type: none"><li>• Implemented a hardware-enforced multi-user authentication system in Verilog with role-based access control</li><li>• Managed dynamic credential lifecycle, supporting creation, modification, deletion, and privilege separation for guest, user, and admin roles</li><li>• Added auto re-locking and hardware-enforced brute-force lockout to mitigate unauthorized access attempts</li><li>• Developed 650+ lines of simulation testbenches covering edge cases, state transitions, and fail-secure behavior</li></ul>	
<b>Project Lead &amp; Software Lead - Mars Rover, 48-hour UCLA Hack Competition</b>	Jul 2024
<ul style="list-style-type: none"><li>• Built a Raspberry Pi Pico-based rover with environmental sensors and ESP32 camera managed via React web interface</li><li>• Developed Python firmware for motion and data control, optimizing it to reduce MQTT communication latency by 86%</li><li>• Led a 4-member team through rapid hardware prototyping and software integration, earning 3rd place overall</li></ul>	
<b>Autonomous Embedded Race Car</b>	Oct 2024 - Dec 2024
<ul style="list-style-type: none"><li>• Developed bare-metal C++ firmware to interface with an 8-sensory array, managing PWM, GPIO, and motor drivers</li><li>• Implemented sensor fusion algorithms and real-time PID control for precise high-speed line following</li><li>• Achieved 2nd fastest overall time</li></ul>	
<b>Lead Researcher - Multi-Agent Access Control</b>	Oct 2025 - Dec 2025
<ul style="list-style-type: none"><li>• Designed provenance-based access control framework to prevent Confused Deputy attacks in multi-agent LLM systems</li><li>• Implemented instruction-level provenance tainting using information flow control</li><li>• Built a Python security middleware to intercept tool calls, enforcing least-privilege across multi-hop workflows</li><li>• Reduced attack success rates by 65% compared to baseline framework</li></ul>
